

ABSTRACT OF THE DISCLOSURE

A reagent shortage detection unit detects that one of the reagents of reagent supply units of analyzing apparatuses is shortage. A reagent shortage occurrence display unit notifies the shortage of the one reagent in response to that the reagent shortage detection unit detects that the one reagent of the analyzing apparatuses is shortage. A control separation unit separates from the control of the analyzing system, the analyzing apparatus in which the one reagent is shortage, in accordance with reagent shortage detection information from the reagent shortage detection unit.
